Art Fundamentals – 2D Design

The burning of coal, natural gas, and oil for electricity and heat is the largest single source of global greenhouse gas emissions—25% of 2010 global greenhouse gas emissions.

<http://bit.ly/1LuqvG>

Coal-fired power plants are a major source of air pollution, releasing pollutants like:

- cadmium
- lead
- mercury
- nitrogen oxides
- sulphur dioxide

<http://bit.ly/2asZOG>

Poor air quality has been linked to a number of health conditions, including:

- chronic and acute respiratory diseases, including asthma, chronic bronchitis, and chronic obstructive pulmonary disease
- heart disease, including chest pain and congestive heart failure
- stroke and diabetes

<http://bit.ly/2asZOG>

THIS IS NOT SUSTAINABLE

Livestock production is becoming increasingly dominated by factory farms or intensive Livestock Operations (ILOs). In an ILO, animals are crammed by the thousands or tens of thousands, often unable to breathe fresh air, see the light of day, walk outside, or eat a blade of grass.

While corn is the king of cattle feed, many industrial food animals are fed just about anything that can add weight cheaply and quickly.

<http://bit.ly/2c8Mkkq>

Alberta, Canada has the largest deposits of tar sands in the world. Oil mined from tar sands is far worse for the climate than most of the oil currently produced and sold elsewhere because of the added pollution from extracting, refining, and delivering it.

<http://bit.ly/2c0mGM>

Canadian government predicts that trains hauling crude oil or ethanol will derail an average of 10 times a year for the next twenty years. Not only does this put people's lives at risk, the estimated fiscal damage is more than \$4 billion.

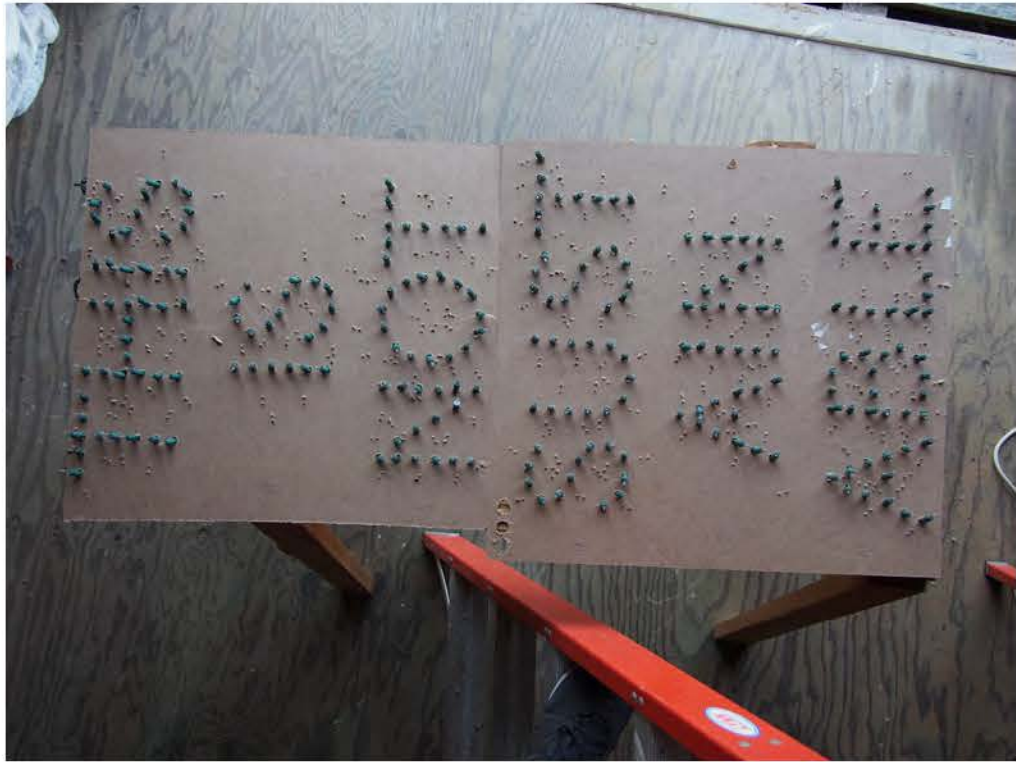

<http://read.bi/2cn614m>

The rate of pipeline incidents in Canada has more than doubled since 2000 and some suggest that the rise may be a worrisome sign of aging infrastructure.

<http://bit.ly/1AbDva>

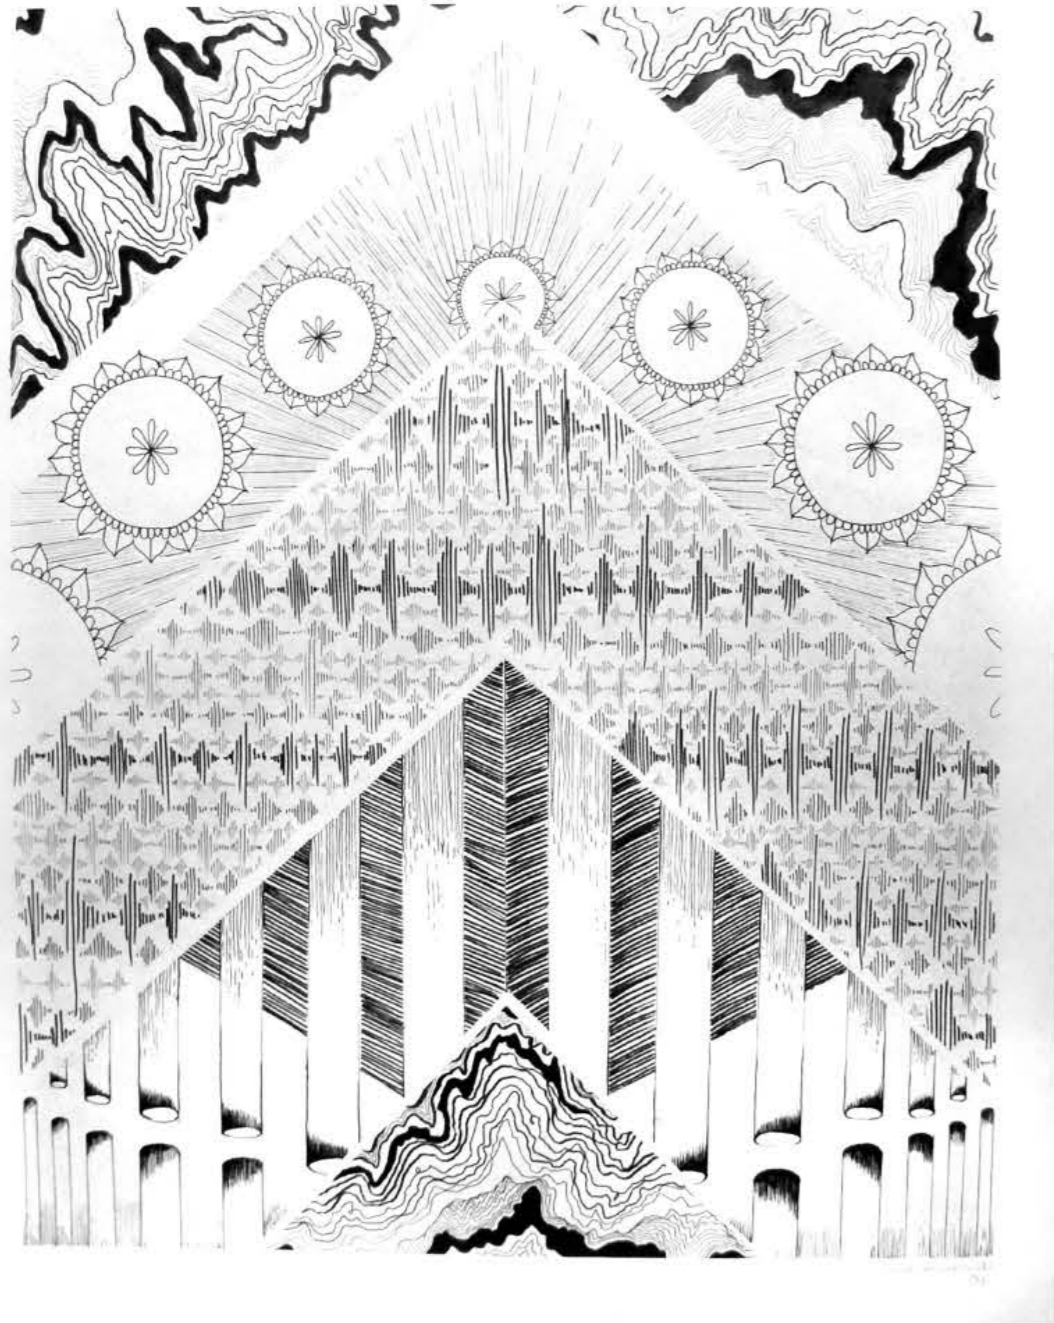

Experts calculated that the break-even global oil price for a new oil sands mining operations was close to \$95 a barrel. The global price of oil was closer to \$50 a barrel in the first quarter of 2015.
